Professional Experience

Toshiba Transmission and Distribution Systems (India) Pvt. Limited — Hyderabad

Senior Software Engineer | Sep 2022 – Present

- Developed and customized Business Object Documents (BODs) to streamline integration processes.
- Implemented and maintained LN modules including Order Management, Manufacturing, and Warehouse Management.
- Troubleshoot and resolved user issues via internal ticketing systems, ensuring timely resolution.
- Gathered and analysed requirements from stakeholders and translated them into ERP solutions.
- Created custom BODs and workflows; customized standard BODs using OCM.

Projects

ION Desk Workflows

- Managed ION administrative tasks including creation and optimization of workflows to streamline business processes.
- Implemented enhancements based on user feedback to improve workflow efficiency.

Advance Request Application

- Designed and developed a dashboard for managing employee advance requests.
- Integrated custom ION workflows to automate finance approval processes.

Concession Request Application

- Customized standard ERP sessions to support concession requests based on maintained master data.
- Implemented static ION workflows for consistent approval routing.

Conditional Workflow for Requisitions

- Enhanced requisition processing by developing conditional workflow models using Configuration Data Files (CDFs).
- Modified standard workflows via OCM to support multiple approval types.

Tour Advance Application

- Developed a form for tour advance submissions integrated with predefined master data.
- Applied eligibility logic by grade/designation to control advance limits and built a dashboard to manage grade-wise limits.
- Automated approval routing through ION workflows to Admin/Finance teams.
